About Me

I am a student who wants to work as a Frontend/Fullstack developer. My main career goal is to expand my current knowledge, keep current with new technologies, and write clean and maintainable code. I am driven, communicative, and eager to learn.

Education

AGH University of Science and Technology

Bachelor in Applied Computer Science   *2017 – 2021*

Some Of My Projects

Dungeons and Dragons App | *React, Redux, TypeScript, Go, MongoDB, Docker, Nginx*   *Show Website* | *Repository*
- Developed a full-stack web application using Go and React on the frontend.
- App works offline and uses Service Workers.
- Using Css Modules for styling.

Book Backlog | *React, Node.js, TypeScript, MongoDB*   *Repository*
- Register and login functionality with JSON Web Token.
- App allows adding, deleting, editing books in DB, give them different statuses and filter out.
- App allows uploading and downloading pdfs.
- Styled using Sass with BEM.

Song Generator | *React, Node.js, MongoDB*   *Repository*
- I was responsible mainly for Frontend.
- App has a login and register functionality.
- Created App that allows generating songs with lyrics written by the user (Google Translate is used to read lyrics).
- Generated song can be played in the browser and downloaded with a button press.
- Child Processes are spawned to generate songs.
- Styled using Sass with BEM.
